

SNS-BOOSTUS1

Sonos® BOOST Wireless Streaming Network Device, White

- *Reliable: Streams without interference in the most challenging wireless environments*
- *Bypasses your Wi-Fi® network to create a separate high-performance wireless network just for Sonos speakers*
- *Broadcasts 360° signals through walls and ceilings for flawless coverage*
- *Simple setup: Connects directly to your router*

Sonos is the world's leading wireless Home Sound System that fills all the rooms in your home with high-quality streaming music, movies, and TV. Sonos streaming music players and wireless speakers fit cohesively with Crestron® home automation solutions, allowing touch screen access to a wide variety of streaming music services, and enabling audiophile-quality wireless audio throughout the home. To simplify purchasing and integration of our combined powerhouse technologies, Crestron is proud to offer the complete line of Sonos products, now available for purchase through Crestron dealers (in the United States only).

BOOST creates a separate, dedicated wireless network for use by Sonos streaming devices, so you can enjoy all your music all over your home without interruption. By creating its own network, BOOST eliminates interference from other wireless devices on your existing Wi-Fi® network.

Use BOOST when:

- Your Wi-Fi is slow or temperamental, or when your network is already in high demand with streaming video, gaming, and Internet usage.
- Wi-Fi doesn't reach all the rooms where you want to use Sonos. Extend the range of your Sonos system by placing a BOOST between the Sonos speaker that's out of reach and the rest of your Sonos system.
- Your network is 5 GHz only (not switchable to 2.4 GHz).
- Your router supports only 802.11n (and settings can't be changed to support 802.11 b/g/n).

For complete details on BOOST and other Sonos products, please visit <http://www.sonos.com>.
