Yale® wireless door locks are offered in deadbolt and lever lock models with pushbutton or touch screen keypads for a complete locking solution. Featuring infiNET EX® wireless communications, they can be integrated with a Crestron® control system, allowing doors to be locked and unlocked from any touch screen in the house, or remotely using your computer or mobile device. Simply unlocking the front door can also turn on the lights, open the window shades, adjust the thermostat, and play your favorite music. Different users can be identified by their unique PIN codes, allowing you to see when and by whom a door has been locked or unlocked, and even receive a text or email when the kids get home or the cleaning crew has finished up.

A CLK-YL-YRL210-CR Wireless Lever Lock features a pushbutton keypad and comes as a complete lockset with a standard lock, cylinder, and lever. It is designed for installation on single-bore (one-hole) doors with a thickness of 1.38 inches to 1.75 inches (35 mm to 45 mm). Each lock has a choice of different finishes for the exterior, and the assembly can be further customized with accessories such as replacement cylinders, drive-in latches, and optional lever styles (lever locks only).

Locking or unlocking the door is easily done by entering a 4-8 digit PIN code onto the keypad. For privacy and accuracy, the lock system supports up to 250 unique user PINs that can operate the door, including a Master PIN code used to program the lock, access menu options, and also operate the door locks. In addition, the lever locks can be operated from the outside by a key and from the inside by thumb turn.

### infiNET EX®

Ultra-reliable infiNET EX wireless technology provides steadfast 2-way RF communications throughout a residential structure without the need for physical control wiring. Yale Wireless Door Locks work together with other infiNET EX devices like our Cameo® Wireless In-Wall Dimmers and Keypads, communicating with a Crestron® control system via the [CEN-RFGW-EX](#) infiNET EX Wireless Gateway<sup>[1]</sup>. Up to 100 infiNET EX devices may coexist on a single infiNET EX network.

### Security & Privacy

The lock can be managed through a Crestron touch screen, enabling you to remotely control and view the status of the lock. From the touch screen, an activity log shows what user PINs were used on a particular door and when. Further options enable you to schedule specific times in which designated user PINs can unlock a door and also enable pre-programmed settings that route text and email alerts to mobile devices, such as cell phones, whenever a door is used. The Tamper Alert feature sounds an audible alarm if attempting to forcibly remove the outside lock from a door.

### Stylish Lever Designs

The Yale lever lock comes standard with Norwood-style levers, but there are an additional five lever pair styles to choose from. Lever pairs are offered in three different finishes: polished brass, oil-rubbed bronze, and satin nickel. Each pair contains levers for both the interior and exterior sides of the door. Installation is as easy as snapping off the existing lever and snapping on the new one.

Notes:

1. Wireless gateway sold separately. The infiNET EX network employs a mesh network topology employing a single gateway with multiple expanders. Most infiNET EX wireless devices provide built-in expander functionality so that each one effectively extends the range of the wireless network beyond the initial range of the gateway. However, battery-powered infiNET EX devices, including Yale wireless door locks, do not provide expander functionality. A dedicated infiNET EX Wireless Expander, model CLW-EXPEX, is also available.
2. "US" codes refer to ANSI / BHMA Numbers for Materials & Finishes.
