CSS-DECOR3

QMT3 Series Décor Shade Hardware

to remove the mounting brackets from the wall, allowing an installer to compensate for mounting conditions that are not level. The QMT motor snaps into the bracket and has a quick release button to make installation and removal quick and easy without the need for special tools. For ceiling mounting, the brackets are rotated 90 degrees, leaving a smaller dimensional projection than a wall mount. End caps slide onto the mounting brackets for a more finished look.

> **NOTE:** The CSS-DECOR3 is sold as part of a custom-configured product and orders are placed via the Crestron® Design Tool for Crestron Shading Solutions. To configure shades or order shading parts and accessories, please use the Crestron Design Tool for Crestron or call 1-855-53-S-H-A-D-E (537-4233) for support.
- *Modern-looking hardware for outside or inside-mounted roller shades*
- *Compact design, takes up less space on mounting surface*
- *Adjustable brackets for shade leveling without any hardware removal*
- *Decorative end caps fit over mounting brackets and come in a variety of finishes*
- *Designed for use with Crestron CSM-QMTDC-163-1 Digital QMT® motors[1]*
- *Optional brackets for manually operated shading solutions*

QMT3 Series Décor Shade Hardware from Crestron® is a small mounting system that allows a Crestron shade to be mounted on a wall, ceiling, or window jamb where the entire shade will be exposed, giving the space a contemporary look. The hardware is designed for use with the compact Crestron CSM-QMTDC-163-1 Digital QMT® motors[1].

The QMT3 Series Décor Shade Hardware also includes shade brackets for manual operation. Manually operated shades are a cost-effective solution for any shading application. Whether for installations in which motorized shades are unnecessary or not feasible or as a stop-gap before upgrading to motorized shades, manual shades offer the small profile and reliable, easy-to-install hardware of a Crestron shading solution with minimum effort.

To enhance child safety, the manual clutch roller shades are equipped with a Chainhold Tension Device. This device is integrated into the product during manufacturing and cannot be removed without breaking. The chainhold tension device maintains tension on the chain when installed properly. If not properly installed, it prevents the shade from fully operating.

An adjustable plate on the mounting brackets lets the idler end of the roller shade be moved up and down without having
