

DESCRIPTION:

The ST-CBL is CRESTRON's programming cable that enables communication between the Series ST-1500 Touchpanel and the CRESNET II remote control system. The programming cable is six feet in length. One end of the ST-CBL has a RA, 3.5 mm stereo connector that inserts into right side of the touchpanel (when viewing the touchscreen). The other end of the ST-CBL has a four-position female connector that inserts into the control system port labeled NET. Refer to the illustration below for proper connection.

NOTE

The ST-CBL only needs to be connected when loading a program.
