

DESCRIPTION:

The VT-3500IMW is a wall-mounted interface module that connects the VideoTouch (VT-3500) to a CRESNET II control system over the CRESNET II network. It can be used in place of the VT-3500IMC, chassis version, which is provided with the touchpanel as a ship-with item.

The VT-3500IMW installs into a one-gang electrical box (2.5 inch depth minimum). Refer to the figure below for connections that need to be made to the back of the unit prior to installation. A decora-style wallplate can be mounted over the unit once it is installed. Connect the 8-position, 8-pin modular telephone jack from the VT-3500 to the front of the VT-3500IMW.

NOTE

Before making any connections, review latest revision of network interconnection drawing (Doc. 5411).
